

New Release

MiniRF announces its ultra-small / ultra-low profile wide band 5-3000 MHz surface mount RFXF9504 transformer.

The RFXF9504 is a low cost broadband transformer ideal for maximizing power transfer from balanced to unbalanced circuits or from the PA to antennas. Its low insertion loss <1 dB at 1200 MHz and <2 dB at 2700 MHz makes this attractive for designers to use this product on a number of RF communication platforms in both narrow and broadband applications. This industry leading surface mount miniature foot print of 0.1 x 0.1x .09 saves board real estate versus printing circuits while its construction provides excellent common mode signal rejection .

This extremely cost effective device is a must in a number of radio frequency design applications to include WiFi, Cellular, ISM, Zigbee/Zwave, VHF/UHF and Video. Contact your local sales representative or sales@minirf.com for samples and pricing. it's a must for any radio design consumer or commercial.
